The challenges and opportunities of working together

John J. Frey, III, MD, Medical Editor

This issue of WMJ contains a number of papers that describe how clinical care, research, and community health might benefit from new directions that bring people together for organizational or community interest. Collaboration is a concept more often touted than actually demonstrated. Terms such as mine shafts, silos, or tradition are used to justify what keeps real collaboration from happening.

Communities, even those with a long history of activism, often struggle with getting groups that may have a lot to learn from each other to actually sit down and plan projects of mutual benefit. Health is a community function as much as a medical one. The article by Ahmed and colleagues describes the end result of a large number of rural initiatives. The most important measure of a community health improvement project is its sustainability, and longer-term evaluation of this large project is required to see what the long-term effects will be. But one immediate effect was getting two medical schools to put funds and faculty time into the effort, funded by the Blue Cross/Blue Shield of Wisconsin endowment located at the medical schools. This could have been akin to the Packers and the Vikings sharing coaching staffs, but in this case it worked.

The article by Serrano and Mondon describes how the integration of behavioral health professionals into primary care practice affects patient care and physician comfort with the burden of mental health issues. They show important effects on the process of care that include improving quality and decreasing costs for patients with depression. Primary care and mental health clinicians have been locked into traditions that separate them from each other. The physical integration Serrano and Monden describe helps clinicians from both disciplines operationalize the biopsychosocial model described over 40 years ago. Their work is a great step forward.

Yale and his colleagues describe an approach begun at the Marshfield Clinic to use the talent and energy of emeritus faculty members as clinical-researchers. The authors did an extensive study of emeritus roles in academic institutions and developed a plan that would meet the needs of senior faculty members who wanted to continue in a different role that would benefit their home institution. This model could be adapted by many academic health centers nationally to avoid losing talented people. It offers a career transition that many of us would welcome.

Austin and Wolfe explore the effectiveness of a program designed to encourage patients with diabetes to get required lab tests. Written reminders with an offer of a small financial incentive were sent to a group of patients who had been out of compliance on at least 1 test for a year or more. Those who received the missing test were given a gift card worth $6 at a local gas station.

Two case reports in this issue highlight unusual presentations of unusual tumors (Amin and Kong) and an unusual allergy (Gimenez and Zacharisen). The latter shows that flavoring food has its risks for children. Many of us are grateful to have avoided becoming allergic to spices as a child; otherwise we would be condemned to a lifelong diet of cheese curds.

Finally, in this issue we take a look back—100 years—at a case report first published in WMJ in 1911. It’s an interesting and nostalgic glimpse at the history of medicine as well as WMJ, and an excellent reminder of how far we’ve come. Look for this to become a regular WMJ feature.

... (Editor disclaimer: I practice in a family medicine clinic affiliated with Access Community Health Center, which is the location of the study by Serrano and Monden, and, despite my mother’s insistence that anything other than salt and pepper were unnecessary on food, I have a recurring bias toward New Mexico green chile to make it through Midwestern winters.)

The mission of WMJ is to provide a vehicle for professional communication and continuing education for Midwest physicians and other health professionals.

WMJ (ISSN 1098-1861) is published by the Wisconsin Medical Society and is devoted to the interests of the medical profession and health care in the Midwest. The managing editor is responsible for overseeing the production, business operation and contents of the WMJ. The editorial board, chaired by the medical editor, solicits and peer reviews all scientific articles; it does not screen public health, socioeconomic, or organizational articles. Although letters to the editor are reviewed by the medical editor, all signed expressions of opinion belong to the author(s) for which neither WMJ nor the Wisconsin Medical Society take responsibility. WMJ is indexed in Index Medicus, Hospital Literature Index, and Cambridge Scientific Abstracts.
