From primary care physicians to hospitalists and specialists, all physicians in all health care settings are going to be affected by the transition to ICD-10—if they haven’t already. And with the October 1, 2014 compliance date just around the corner, it’s important that physicians are prepared. A lack of compliance will result in a direct hit to a practice’s revenue cycle, productivity, and quality data.

ICD-10 is arguably one of the biggest changes to health care in decades. With significant administrative and financial implications, its implementation is a massive undertaking for practices. Proponents believe ICD-10 will improve the ability to measure health care services provided to patients, enhance clinical decision-making, track public health issues, conduct medical research, identify fraud and abuse, and design payment systems to ensure services are reimbursed appropriately. But it is not without controversy.

Physicians, hospital administrators, organized medicine, and others have voiced many concerns, particularly that the increase in the number of diagnosis codes—from 14,000 in ICD-9 to about 69,000 in ICD-10—make ICD-10 too complex and difficult to use. Implementation was delayed a year to allow more time to prepare, but the Centers for Medicare and Medicaid Services has made it clear the deadline will not be extended a second time.

Although the ICD-10-CM diagnosis code set is substantially larger than its predecessor, ICD-10 is not that radically different. ICD-10 codes are, however, more precise. As such, they promise to provide more accurate information about the patient, which in turn will justify medical necessity for utilization of goods, services, and complex procedures and should decrease the need to include supporting documentation with claims.

Currently, insufficient documentation results in inaccurate reimbursement, higher probability for audit recoveries, and poorly demonstrated quality of care. Less specificity in ICD-9 codes often results in physicians not receiving appropriate credit for treating more complex cases. The medical record needs to link symptoms, complications, and manifestations to disease process, ultimately demonstrating medical necessity and clinical appropriateness for ordering and rendering services. The physician who picks up the patient record should have a clear, concise picture that identifies exactly what was done for the patient, including outcomes, orders, and other information needed to provide continuing care. The more specific documentation required with ICD-10 will drive more appropriate reimbursement across the spectrum.

There are a number of resources available to help practices prepare for ICD-10. (See box.) And because detailed physician documentation is the foundation of ICD-10, the Wisconsin Medical Society has prepared a webinar series specifically for physicians. ICD-10: What Physicians Need to Know, is a 30-minute introductory program available online, on-demand that addresses the fundamentals of ICD-10. There are also sessions available for 20 different specialties that delve into the details necessary for specified diagnosis code assignment relevant to each of those specialties. Information is available on the Society’s website at www.wisconsinmedicalsociety.org/resources/icd-10.
The mission of *WMJ* is to provide a vehicle for professional communication and continuing education for Midwest physicians and other health professionals.

*WMJ* (ISSN 1098-1861) is published by the Wisconsin Medical Society and is devoted to the interests of the medical profession and health care in the Midwest. The managing editor is responsible for overseeing the production, business operation and contents of the *WMJ*. The editorial board, chaired by the medical editor, solicits and peer reviews all scientific articles; it does not screen public health, socio-economic, or organizational articles. Although letters to the editor are reviewed by the medical editor, all signed expressions of opinion belong to the author(s) for which neither *WMJ* nor the Wisconsin Medical Society take responsibility. *WMJ* is indexed in Index Medicus, Hospital Literature Index, and Cambridge Scientific Abstracts.

For reprints of this article, contact the *WMJ* at 866.442.3800 or e-mail wmj@wismed.org.
